# Business Key Differentiator

**Cyberarchs** prioritize collaborating with technology vendors to ensure Return on Investment & Total Cost of Ownership to support smooth business decisions. Our initial consultations and assessments are entirely Value Added without any financial obligations for the customers.

# CYBERARCHS SERVICES

## Network Security, Professional Services.

### Perimeter Firewall (PF)

We offer state-of-the-art Perimeter Firewall solutions that work as the first line of defense against potential cyber threats, providing a protective barrier around your network.

### Data Centre Firewall (DCFW)

Our DCFW solutions aim to safeguard your data centres from advanced threats, ensuring the protection of sensitive information and critical applications.

### Web-Security (Cloud/OnPrem)

We provide bespoke web security solutions for both cloud-based and on-premise systems, ensuring comprehensive security for your digital interactions.

### End Point Security (EPP, EDR, XDR)

From basic endpoint protection platforms (EPP) to extended detection and response (XDR) systems, our endpoint security services cater to your unique needs, ensuring a secure working environment for your business.

### Load Balancers (LB)

Our load balancing solutions optimize resource use, maximize throughput, reduce response time, and ensure service continuity in your IT infrastructure.

### Web Application Firewall (WAF)

We deliver robust Web Application Firewall solutions that protect your web applications from various vulnerabilities, ensuring an additional layer of security.

### Email Security (Cloud/OnPrem)

Our email security solutions for both cloud-based and on-premise systems help protect against phishing attacks, spam, malware, and other email-borne threats.

### Systems Information Event Management (SIEM)

We offer SIEM solutions that provide real-time analysis of security alerts, ensuring a comprehensive overview of your IT security.

## **Network Detection & Response (NDR)**

We implement NDR technology assist in identifying, investigating, and mitigating threats across your network infrastructure, ensuring swift and effective responses to security incidents.

## **Network Address Control (NAC)**

We implement Network Address Control solutions that help control access to network resources, preventing endpoint devices from launching threats on the network.

## **Identity and Access Management (IAM)**

We implement IAM solutions focus on managing digital identities, ensuring that the right individuals have access to your business's technology resources.

## **Privileged Access Management (PAM)**

We implement PAM services that control and monitor privileged user activities, mitigating the risks associated with privileged credentials.

## **Customer Identity and Access Management (CIAM)**

We implement CIAM solutions ensure secure and seamless customer experiences, managing and protecting customer identities.

## **Application Security**

We implement application security services that protect your applications from threats throughout their lifecycle, ensuring their secure design, development, and deployment.
